
How One Director Streamlined Time Tracking Across the U.S. with Klynke

In today's fast-moving, multi-location work environments, time tracking can quickly become a headache - especially when teams and contractors are spread across multiple time zones.

For one U.S.-based Director of Onsite Services overseeing departments nationwide, the old way just wasn't cutting it.

“Klynke has made time tracking quick and efficient for our contractors across the U.S. The process of entering project hours and descriptions is seamless and doesn't take up much time.”

From Spreadsheets to Seamless

Before Klynke, the team relied on spreadsheets and manual tallying - a system that was not only time-consuming, but error-prone and hard to manage across time zones.

“On our side, Klynke has replaced our old, lengthy system of spreadsheets and manual tallying.”

With Klynke fully integrated into Microsoft Teams, the team was able to log hours where they already worked - without switching tools or losing time to repetitive processes.

Built for Distributed Teams

Whether in New York, Denver, or Los Angeles, team members could track their hours accurately using Klynke's **time zone-aware features**, ensuring consistency and visibility from coast to coast.

“What I love most is the time saved on administration. The visibility of provider activity is great, and filtering and sorting data is effortless.”

Klynke turned a once-manual process into a streamlined, reliable workflow - freeing up time and increasing confidence in the data.
